Industrial Contract-Tickets confer a right to travel solely by the Industrial Train and by no higher class than that for which they are issued. If a holder chooses to travel by another train in a higher class than he contracts for, he must pay the ordinary fare as if his Industrial Ticket had no existence. The term "Industrial Train" is confined strictly to that ordinary Passenger train which is due first to arrive from the country each week day morning at Port Louis, and to that ordinary Passenger Train which is notified to leave Port Louis last at night.

What is the Source of the Water Supply; the Quality of the Water; and the Amount of Water available for each Patient every day?

Supplied in iron pipes.

1o. Plaines Wilhems Canal; quality indifferent; supply irregular during the dry season; made use of for watering and cleaning purposes.

2o. Mare-aux-Vacoas; quality generally good; made use of for drinking, cooking and bathing purposes; quality inferior during the dry season, has to be boiled and filtered. The quality of the water has greatly improved of late.

What is the number of :
I. Lavatories?
II. Baths?
III. Latrines?

Eleven.

Three shower baths, 4 hip baths, 6 large open and 2 slate baths.

Twenty three Latrines containing 51 tubs.

What is the system of Sewerage?

No Sewers exist on this Establishment for the removal of excreta, such removal being effected by means of the dry earth system. The tubs are collected every day by Prison labour and the service is on the whole regularly and satisfactorily performed. Rain water and that from the Bath rooms and wash house is carried off by surface drains and underground pipes to the vegetable gardens to be utilized for watering purposes. A new underground drain with glazed earthenware pipes was constructed in 1901 by the Surveyor General's Department to carry off the waste water from the kitchen, bathrooms and latrines of the two Infirmarys to the back gardens. It is received into a covered collecting tank and used for watering purposes. As this system operates in a very satisfactory manner and is a great improvement on the old open drains formerly in use, the Superintendent of the Lunatic Asylum has recommended that all the waste water of the Establishment be removed by means of underground sewer pipes drains into such covered collecting tanks in order to prevent the formation of pools in back gardens and their serving as suitable breeding grounds for the anopheles mosquitoes.

QUESTION II.—Continued.

II. What kinds of mechanical restraint are in use.

Strong canvas dresses, only employed to prevent patients destroying their clothes. The hands are attached to the dress when there is much violence or attempt at suicide.

III. Whether any, and if any, how many, cases of cruelty by Attendants to Patients have been brought to the notice of the proper authority, and what was the result in each case.

} Belonging to the Asylum.

Are the Patients, as a rule, given daily exercise, their health permitting ?

Yes.

Are they confined to airing courts, or allowed to walk in other grounds, and sent beyond the Asylum ?

They are, weather permitting, sent in bands of about 50 for exercise and airing in the gardens of the Asylum.

Are any means taken to amuse the Patients or to induce them to amuse themselves ? Detail them.

The Asylum is provided with a magic lantern and a piano, and the female patients are frequently entertained by lady visitors who very kindly play and sing for them and make them dance. A special entertainment of bioscophone (cinematograph & graphophone) with distribution of delicacies was given to the patients on 29.11.02, in honor of the King's Coronation. They will soon be provided with a cinematograph.

How many religious services were held in 1902 ?

No religious services are held in the Asylum.

What was the average attendance ?

In what building and how many could it contain ?

The Catholics and Protestants are however frequently visited by the Ministers of their Religion.

EE.

RESULTS
OF
METEOROLOGICAL OBSERVATIONS
TAKEN DURING THE YEAR
1902
AT THE
ROYAL ALFRED OBSERVATORY,
MAURITIUS.

INTRODUCTION.

The Observatory, in Latitude $20^{\circ} 5' 39''$ S. and Longitude $3^{\text{h.}} 50^{\text{m.}} 12^{\text{s.}} 6$ E. of Greenwich is situated on a plain about three miles from the West coast and stands in eleven acres of Crown Land. The reference mark, at the entrance of the Main Building is 178.1 feet above sea level.

From West-South-West through West to North there is an uninterrupted view of the sea and from North through East to South-East the ground generally rises to Mount Piton, the summit of which bears about four miles East-South-East and is 917 feet above mean sea level. Between South-East and South-West there is a chain of mountains the highest peak of which, the Pieter Both, bears nearly six miles due South and has an altitude of 2,874 feet.

The nearest extremities of two spurs which run North and North-West from the Pieter Both are at distances of three to four miles, and have an elevation of about 560 feet.

The Island is of volcanic origin and the rocks are more or less magnetic. Around the Observatory the soil has a depth of three to fourteen feet, below which is solid basalt.

The mean daily values of atmospheric pressure, temperature of the air and of evaporation, and wind velocity, given in columns 1, 5, 6 and 16 are computed by the formula

$$x = \left\{ \frac{x_0 + x_{24}}{2} + x_1 + x_2 + x_3 \dots + x_{23} \right\} \div 24$$

in which $x_0, x_1, x_2, \dots, x_{24}$ represent the value of the element at the hours 0, 1, 2 ... 24, Mauritian Civil Time.

The daily maximum and minimum temperatures columns 2 and 3, are the highest and lowest points on each day's thermogram, duly corrected for instrumental error.

The mean daily temperature of the dew point, the vapour tension and degree of humidity, columns 7, 8 and 9, are deduced directly from the mean daily temperature of the air and of evaporation by the aid of Glaisher's Hygrometrical Tables, and are not the means of hourly values.

The amount of rainfall given in column 10 refers to the civil day: it is derived from the records of the Beckley Pluviograph.

The numbers given in column 11 indicate the amount of water evaporated from a shallow vessel exposed on the lawn; the gauge is read every day at 9^h and the amount entered for the day on which it is measured.

The amount of ozone is observed daily at 9^h, and to obtain the amount for each civil day, given in column 12, three-eighths of the amount observed at 9^h is added to five-eighths of the amount observed on the following day.

The mean daily amount of cloud, column 13, is the mean of observations made at 6^h, 9^h, 13^h and 15^h of the total amount of cloud, on a scale of 0-10; 0 representing a clear sky and 10 an overcast sky.

The mean daily direction and velocity of the wind given in columns 14 and 15 are computed from the mean daily North and East components as derived from the hourly measures of the anemograms. In column 16 is given the mean daily velocity of the wind as recorded by the anemometer, irrespective of direction.

The abbreviations under the heading weather have the following significance.

<i>b</i>	denotes	blue sky, cloudless	<i>m</i>	denotes	misty
<i>c</i>	"	partially cloudy	<i>o</i>	"	overcast
<i>d</i>	"	drizzle	<i>p</i>	"	passing showers
<i>f</i>	"	fine	<i>q</i>	"	squally
<i>g</i>	"	gloomy	<i>r</i>	"	continuous rain
<i>l</i>	"	lightning	<i>t</i>	"	thunder

The day is divided by colons, generally into 4 parts, from 0^h — 6^h; 6^h — 12^h; 12^h — 18^h; and 18^h — 24^h except when the same remarks apply to two or more successive periods of 6 hrs, in which case the position of the colon indicates to what portion of the day the remarks apply. If in any division different types of weather are included, it is to be understood that they occurred in the order indicated.

In the table of monthly results (page 14) a clear day is considered to be one on which the mean amount of cloud is below 7.

A "Rainy day" is one on which .005 inch, or more, of rain was measured.

All days on which thunder was recorded, even though no lightning was seen, are included under the head of "days of thunderstorm": those on which lightning was seen, but no thunder heard, have not been counted.

"Days of Gale" are those days on which the velocity for one hour was 34 miles per hour or upwards.

MISCELLANEOUS WORK IN 1902.

Actinometric observations were taken on those days on which the sky was free from cloud in the neighbourhood of the Sun at or near apparent noon. The greatest mean effect for an exposure of 2 minutes was $9^{\circ}.91$ on February 1, the Sun's mean altitude being $86^{\circ}.23'$: the least $8^{\circ}.58$ on August 12, the Sun's mean altitude being $54^{\circ}.24'$.

The Milne Seismograph was at work throughout the year : a new boom for registering North and South Earth movements on the same strip of paper as the boom registering East and West movements was added on February, 92 Earthquakes were recorded.

The Sun was observed on 312 days, on 238 of which no spots were seen. 326 photographs were taken.

Rainfall returns were received from 54 stations in different parts of the island. The mean amount of rain collected during the year at all stations was 76.56 ins. as compared with an average of 77.24 ins.

Observations made on board vessels in the Indian Ocean were tabulated and detailed accounts of gales and hurricanes recorded. So far as is yet known there were 7 cyclones in the South Indian Ocean during the year. The centre of one passed very near Rodrigues on February 3, a second passed 50 miles North of Mauritius on February 5, a third passed over the Observatory at Mauritius on February 9, and a fourth between Mauritius and Rodrigues on February 17th.
